

Generate music albums based on characters

Feedback and Reflection Record on March 21st

Professor's question: How to match characters with music content? If only based on the backstory, it may not be ideal and meaningful.

reflection:

Because we have the age, personality, appearance, backstory, and attire of the characters, we can extract information dimensions as follows:

Dimension	Original Information	Music Style
Age	young/adolescent, middle-aged/elderly	Rhythm (fast/medium/slow)
Personality	Outgoing/introverted, lively/melancholic	Tone (bright in major/deep in minor)
Appearance	European style, Chinese style, American style, cartoon style, Japanese and Korean style	Type (Baroque, China-Chic Classical, American village, Japanese cartoon)
Background story	Key events (such as war, love, science fiction)	Type (epic/romantic/cyberpunk)
Dress style	retro/futuristic/minimalist/gorgeous	musical instrument(pure piano/synthesizer/guitar/orchestral)

Input extraction information:

Generate an album for {name}, who is {age}, {personality}, {profession}, has experienced {background events}, what {appearance} is, and likes to wear {clothing}. Music should reflect {Keyword 1}+{Keyword 2}. "

Take my character Amy as an example:

Generate a music album for Amy, a 20-year-old Nordic Icelandic girl with a humorous, optimistic, and adventurous personality. Her professional trait is her ability to communicate with animals through magic, making her an animal protector in Iceland. She has a typical European appearance, likes practical and simple clothes, and music needs to reflect nature and fantasy.

——》 The corresponding music is:

Medium tempo rhythm, bright in major key, Baroque style, romantic, guitar
